Claims 1-26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the presence of both a thixotropic and a Newtonian-like thickener. The specification defines the Newtonian-like thickener as having thixotropic thickener shear rate dependence. It cannot be determined, with certainty, from applicants' definitions the what the dividing line between one type of thickener and another.

Claim 20 recites an open time 3 minutes longer than a reference formulation without specifying what this reference formulation is.

Claim 24 recites a "coating obtainable from". This language is indefinite.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO '013 in view of WO '945.

WO '013 discloses aqueous coating compositions comprising crosslinkable water dispersible oligomers, dispersed vinyl polymer, TiO₂ pigment and thickeners (see claims. page 28 and examples). These compositions are taught as displaying open times and tack -free times such as instantly claimed (see claim 4). The oligomers and

polymers of the reference possess acid values, Tg values, MW's and particle sizes such as claimed instantly (page 19 and claims).

While the reference fails to explicitly recite relative amounts of thickener, WO '945 teaches the addition of thickener in amounts such as instantly claimed to similar aqueous coating compositions.

Since the distinction between the two types of thickener recited by applicants cannot be ascertained, it is the position of the examiner that the thickeners of either the primary or secondary references meet the instant limitations.
